Louisiana

URS Table Number	General Notes
All	In December 2013, two Local Governing Entities (LGEs) ceased use of the electronic health record system (Clinical Advisor) operated by the State Managed Care Organization, Magellan Health Services. This system is used by the Office of Behavioral Health (OBH) for all Block Grant/TEDS reporting. OBH Analytics Section has been working with the electronic health record system vendor of the LGEs. These two LGEs have not yet submitted the required client level data needed for Block Grant Reporting. This represents approximately 37% of data previously reported.
4	With the launch and utilization of multiple health records, the state continues to experience challenges relative to data collection. Efforts have been made to improve data collection, and have yielded a decrease in the number of consumers missing employment status and corresponding changes to the number of consumers reported Not in Labor Force or unemployed.
6	The state has experienced disturbances in data collection, particularly in its claims and clinical data systems. There has been a change from previous years in definition and method of calculation of admission dates and discharge dates, resulting in a decrease in identified discharged consumers increasing those identified as continuing and contributing to the increase in the total number of consumers served in community programs at the beginning of the year.
6	During Fiscal Year 2014, the state has experienced a disturbance in data collection as multiple electronic health records began to be used resulting in a decrease in number of admissions to community programs.
6	The managed care system expanded capacity of inpatient hospital level care to include private inpatient facilities. During Fiscal Year 2013, Louisiana decreased the number of hospital beds in state inpatient psychiatric facilities and closed one state hospital with a subsequent increase in the number of persons discharged from state run facilities.
8	The decrease in total MHBG expenditures for Non-Direct Service Activities is due to changes in reporting methodology.
9 & 11	Only 248 YSS-F surveys were completed in FY2014. This is 43% fewer surveys than were completed in FY2013 and has resulted in an increase in the percent of children/adolescents reporting positively about Functioning and percent of children/adolescents reporting positively about Outcomes.
12 & 14A	With the launch and utilization of multiple health records, the state continues to experience challenges relative to data collection and this has resulted in a decrease in percent of adults/children served by the SMHA with co-occurring MH/SA diagnoses and the total number of Multiracial consumers with SMI/SED.
15	With the launch and utilization of multiple health records, the state continues to experience challenges relative to data collection. Efforts have been made to improve data collection, and have yielded improved data collection resulting in a decrease in the number of consumers missing residence status and corresponding changes to the number of consumers reported living in Private Residence and in Homeless/Shelter.
16 & 17	EBPs are practiced in some areas of the state but not others resulting in a decrease in the total number of consumers receiving Supported Housing services, Integrated Dual Diagnoses services and Total number of consumers receiving Illness Self- Management services. The use of fidelity measures differs from region to region within the state. In addition, staff training and the use of toolkits varies across the state.
