Maine

URS Table Number	General Notes
6	The average LOS of adults discharged from state hospitals and average LOS of adults in facility for less than a year who were state hospital residents at the end of the year is skewed by some patients who stayed in the state hospital much longer than FY13 patients. Therefore, the Median LOS is a better measure of a midpoint for FY14 LOS.
8	FY2014 total MHBG expenditures for no-direct service activities are “actual” expenditures from the state’s financial management system, whereas FY2013 data was “planned” expenditures from the original BG application.
12	The decrease in the percent of children served by the SMHA with co-occurring MH-SA diagnoses is partly due to some SA children aging out without others coming in
15	The decrease in total number of consumers living in Private Residence and increase in total number of consumers Homeless/Shelter may be due to the use of different systems to report data than last year.
16	The decrease in the total number of clients receiving supported housing, therapeutic foster care, MST services and increase in supported employment services may be due to the fact that the team that work on the table this year is different than last year.
