 Overall Implementation of Wisconsin's new MH State data system has led counties to report more consumers in Community Mental Health Programs and improve hospital provider tracking which has changed the ratio of State vs. Other hospital usage relative to 2012.
 Gender None

Table 6 State Notes:

Hospital None

 Overall The figures in this table differ from the 2012 figures significantly. It is suspected that the implementation of a new State MH data system in 2013 resulted in variable data from some counties. The 2013 figures are more similar to the 2011 figures.

Wisconsin

URS Table Number	General Notes
5a	We have Medicaid claims data, but no other funding source data. Thus, we cannot be sure if any consumers are "Medicaid only". All consumers with MA paid claims are put in the "Both" category. The decrease in Medicaid use from 2012 may be due to changes in State Medicaid policies.
12	The increase in the percentage of children with SED is likely due to the expansion of Wisconsin's Comprehensive Community Services (CCS) initiative (a psychosocial rehab Medicaid benefit).
14a	<p>State definition of SMI/SED is similar to federal definition, but worded differently: "Persons in Need of Ongoing, High Intensity, Comprehensive Services - have a primary diagnosis of a major mental illness or severe emotional disturbance, and they have substantial needs for psychiatric and medical treatment, including substance abuse, daily living skills, budgeting, job training, family support and support at school. Some may have a history of trauma, such as physical or sexual abuse or neglect, which contributes to the mental health problem. Persons in this category may need help to access community resources, such as safe, affordable housing, benefits and entitlements, and legal assistance. They need support and assistance in combating stigma and discrimination. Without ongoing, comprehensive services, these persons will be at the highest risk for increased psychiatric hospitalizations or extensive reliance on placement in nursing homes, child-caring institutions, and other supervised settings; confinement in jail; homelessness; and increased harm to self. These persons will sometimes experience acute psychiatric crises as a result of increases in symptoms of mental illness or environmental stresses. Because some may be reluctant to access mental health or other services, extensive outreach may be needed to engage them into services. The person and family need ongoing, comprehensive treatment and intensive community support and wraparound services to help them achieve and maintain a more stable level of functioning and a lifestyle relying more on natural supports and less on formal mental health services." State definition also includes this group: "Persons in Need of Ongoing Low Intensity Services - have a diagnosed mental disorder. They function in a fairly stable manner but may occasionally experience acute psychiatric crises. Some may have a history of trauma, such as physical or sexual abuse or neglect, which contributes to the mental health problem. These persons need services such as ongoing medication management (prescription, evaluation, and monitoring), case management, and/or periodic support contacts. With the benefit of such services, they are usually able to live relatively independently and have good potential for recovery and increasing success in community living. Without ongoing supports and services, however, they can be at a serious risk for relapse and for much more costly treatment, including intensive crisis intervention and psychiatric hospitalization."</p>
