LIST OF TABLES

Trends in Substance Abuse Treatment Admissions Aged 12 and Older: 2000-2010

All Admissions

1.1	Number of admissions aged 12 and older, by Census division and State or jurisdiction: 2000-2010.....	48
1.2	Admissions per 100,000 population aged 12 and older, by Census division and State or jurisdiction: 2000-2010.	50
1.3	Admissions per 100,000 population aged 12 and older, adjusted for age, gender, and race/ethnicity, by Census division and State or jurisdiction: 2000-2010.....	52

Selected Primary Substance

1.4a	Primary alcohol admissions, by Census division and State or jurisdiction: 2000-2010. Number of admissions aged 12 and older.....	54
1.4b	Primary alcohol admissions, by Census division and State or jurisdiction: 2000-2010. Admissions per 100,000 population aged 12 and older.....	56
1.5a	Primary marijuana admissions, by Census division and State or jurisdiction: 2000-2010. Number of admissions aged 12 and older.....	58
1.5b	Primary marijuana admissions, by Census division and State or jurisdiction: 2000-2010. Admissions per 100,000 population aged 12 and older.....	60
1.6a	Primary heroin admissions, by Census division and State or jurisdiction: 2000-2010. Number of admissions aged 12 and older.....	62
1.6b	Primary heroin admissions, by Census division and State or jurisdiction: 2000-2010. Admissions per 100,000 population aged 12 and older	64
1.7a	Primary cocaine admissions, by Census division and State or jurisdiction: 2000-2010. Number of admissions aged 12 and older.....	66
1.7b	Primary cocaine admissions, by Census division and State or jurisdiction: 2000-2010. Admissions per 100,000 population aged 12 and older.....	68
1.8a	Primary methamphetamine/amphetamine admissions, by Census division and State or jurisdiction: 2000-2010. Number of admissions aged 12 and older.....	70
1.8b	Primary methamphetamine/amphetamine admissions, by Census division and State or jurisdiction: 2000-2010. Admissions per 100,000 population aged 12 and older	72
1.9a	Primary non-heroin opiates/synthetics admissions, by Census division and State or jurisdiction: 2000-2010. Number of admissions aged 12 and older.....	74

LIST OF TABLES (CONTINUED)

1.9b	Primary non-heroin opiates/synthetics admissions, by Census division and State or jurisdiction: 2000-2010. Admissions per 100,000 population aged 12 and older	76
------	---	----

**Substance Abuse Treatment Admissions Aged 12 and Older,
by Primary Substance of Abuse: 2010**

2.1	Admissions aged 12 and older, by Census division and State or jurisdiction, according to type of service at admission: 2010. Percent distribution	78
2.2	Number of admissions aged 12 and older, by Census division and State or jurisdiction, according to primary substance of abuse: 2010.....	81
2.3	Admissions per 100,000 population aged 12 and older, by Census division and State or jurisdiction, according to primary substance of abuse: 2010.	83
2.4	Admissions per 100,000 population aged 12 and older, adjusted for gender, age, and race/ethnicity, by Census division and State or jurisdiction, according to primary substance of abuse: 2010.....	86

**Characteristics of Substance Abuse Treatment Admissions Aged 12 and Older,
by State or Jurisdiction and Primary Substance of Abuse: 2010**

3.1	Alabama admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	89
3.2	Alaska admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	90
3.3	Arizona admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	91
3.4	Arkansas admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	92
3.5	California admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	93
3.6	Colorado admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	94

LIST OF TABLES (CONTINUED)

3.7	Connecticut admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	95
3.8	Delaware admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	96
3.9	Florida admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	97
3.10	Hawaii admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	98
3.11	Idaho admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	99
3.12	Illinois admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	100
3.13	Indiana admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	101
3.14	Iowa admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	102
3.15	Kansas admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	103
3.16	Kentucky admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	104
3.17	Louisiana admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	105
3.18	Maine admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	106

LIST OF TABLES (CONTINUED)

3.19	Maryland admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	107
3.20	Massachusetts admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	108
3.21	Michigan admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	109
3.22	Minnesota admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	110
3.23	Missouri admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	111
3.24	Montana admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	112
3.25	Nebraska admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	113
3.26	Nevada admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	114
3.27	New Hampshire admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	115
3.28	New Jersey admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	116
3.29	New Mexico admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	117
3.30	New York admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	118

LIST OF TABLES (CONTINUED)

3.31	North Carolina admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	119
3.32	North Dakota admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	120
3.33	Ohio admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	121
3.34	Oklahoma admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	122
3.35	Oregon admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	123
3.36	Pennsylvania admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	124
3.37	Puerto Rico admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	125
3.38	Rhode Island admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	126
3.39	South Carolina admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	127
3.40	South Dakota admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	128
3.41	Tennessee admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	129
3.42	Texas admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	130

LIST OF TABLES (CONTINUED)

3.43	Utah admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	131
3.44	Vermont admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	132
3.45	Virginia admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	133
3.46	Washington admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	134
3.47	West Virginia admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	135
3.48	Wisconsin admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	136
3.49	Wyoming admissions aged 12 and older, by gender, age at admission, and race/ethnicity, according to primary substance: 2010. Percent distribution	137

59	Wyoming admissions aged 12 and older, by primary substance of abuse: 2000-2010	45

HIGHLIGHTS

This report presents data from the Treatment Episode Data Set (TEDS) by Census division and State for admissions in 2010, and trend data for 2000 to 2010. The report provides information on the demographic and substance abuse characteristics of admissions to treatment aged 12 and older for abuse of alcohol and/or drugs in facilities that report to individual State administrative data systems.

For 2010, 1,820,737 substance abuse treatment admissions aged 12 and older were reported to TEDS by 48 States and Puerto Rico (the District of Columbia, Georgia, and Mississippi did not report admissions for 2010) [Table 1.1].

Trends in Substance Abuse Treatment Admissions Aged 12 and Older: 2000-2010

All Admissions

- Between 2000 and 2010, among the nine Census divisions, about 23 percent of all admissions reported were in the Middle Atlantic Census division, and the average rate of admissions was highest in the New England and Middle Atlantic divisions—about 1,320 and 1,270 per 100,000 population aged 12 and older, respectively [Tables 1.1 and 1.2 and Figure 1].
- Between 2000 and 2010, the U.S. population aged 12 and older grew by about 11 percent but the number of treatment admissions increased by 4 percent [Table 1.1]. Consequently, the treatment admission rate in 2010 (691 per 100,000 population aged 12 and older) was about 6 percent lower than the rate in 2000 (738 per 100,000 population) [Table 1.2].

Alcohol

- The treatment admission rate for primary alcohol was 18 percent lower in 2010, at 282 per 100,000 population aged 12 and older, than in 2000 (342 per 100,000). The rate fluctuated between 2000 and 2010 but 2000 had the highest rate and 2010 had the lowest rate in this time period [Table 1.4b and Figure 2].
- Alcohol admission rates were lower in 2010 than in 2000 in eight out of nine Census divisions; the exception was the West North Central division.
- From 2000 through 2010, alcohol treatment admission rates were generally highest in the Middle Atlantic, New England, Mountain, and West North Central divisions.

Marijuana

- The treatment admission rate for primary marijuana was 21 percent higher in 2010, at 127 per 100,000 population aged 12 and older, than in 2000 (105 per 100,000) [Table 1.5b and Figure 3].
- Marijuana admission rates were higher in 2010 than in 2000 in all Census divisions except for the Mountain and South Atlantic divisions.
- From 2000 through 2010, marijuana treatment admission rates were consistently highest in the West North Central and Middle Atlantic divisions.

Heroin

- The treatment admission rate for primary heroin was 15 percent lower in 2010, at 97 per 100,000 population aged 12 and older, than in 2000 (114 per 100,000) [Table 1.6b and Figure 4].
- Heroin admission rates were higher in 2010 than in 2000 in five of the nine Census divisions and lower in the other four divisions (Middle Atlantic, New England, Pacific, and South Atlantic). The rate dropped dramatically in the Pacific division during this period (from 179 per 100,000 to just 83 per 100,000 population).
- From 2000 through 2010, heroin treatment admission rates were consistently highest in the New England and Middle Atlantic divisions.

Cocaine

- The treatment admission rate for primary cocaine was 44 percent lower in 2010, at 56 per 100,000 population aged 12 and older, than in 2000 (100 per 100,000) [Table 1.7b and Figure 5].
- Cocaine admission rates were lower in 2010 than in 2000 in all nine Census divisions.
- From 2000 through 2010, cocaine treatment admission rates were highest in the Middle Atlantic division.

Methamphetamine/amphetamines

- The treatment admission rate for methamphetamine/amphetamines was 26 percent higher in 2010, at 43 per 100,000 population aged 12 and older, than in 2000 (34 per 100,000). Methamphetamine/amphetamine treatment admission rates peaked in 2005 at 69 per 100,000, then declined in every year through 2010 [Table 1.8b and Figure 6].
- Methamphetamine/amphetamine rates were higher in 2010 than in 2000 in all nine Census divisions.
- From 2000 through 2010, methamphetamine/amphetamine treatment admission rates were highest in the Pacific division, followed by the Mountain and West North Central divisions.

Opiates other than heroin

- The treatment admission rate for opiates other than heroin was 400 percent higher in 2010, at 60 per 100,000 population aged 12 and older, than in 2000 (12 per 100,000). Rates increased in every year from 2000 through 2010 [Table 1.9b and Figure 7].

- The admission rates for opiates other than heroin were higher in 2010 compared to 2000 for each of the nine Census divisions.
- From 2000 through 2010, treatment admission rates for opiates other than heroin were highest in the New England division.

Substance Abuse Treatment Admissions Aged 12 and Older: 2010

- In 2010, the treatment admission rate was higher for primary alcohol abuse than for any primary illicit drugs. The primary alcohol admission rate was 282 per 100,000 population (the rate for alcohol alone was 156 per 100,000 and the rate for alcohol with secondary drug abuse was 126 per 100,000). The highest rates of treatment admissions for illicit drugs in 2010 were for marijuana (127 per 100,000) and heroin (97 per 100,000) [Table 2.3].
- Treatment admission rates for 2010 were higher for primary alcohol abuse than for any of the major illicit drugs in each Census division and in 44 of the 49 reporting States and jurisdictions. The primary illicit drug varied by division: heroin in the New England and Middle Atlantic divisions, methamphetamine/amphetamines in the Pacific division, non-heroin opiates in the East South Central division, and marijuana in the other five divisions [Table 2.3].

CHAPTER 1

TRENDS IN SUBSTANCE ABUSE TREATMENT ADMISSIONS AGED 12 AND OLDER: 2000-2010

This report presents data from the Treatment Episode Data Set (TEDS) by Census division and State or jurisdiction for admissions in 2010 and trend data for 2000 to 2010. It is a companion to the report, *Treatment Episode Data Set (TEDS): 2000-2010 National Admissions to Substance Abuse Treatment*. These reports provide information on the demographic and substance abuse characteristics of admissions to treatment aged 12 and older for abuse of alcohol and/or drugs in facilities that report to individual State administrative data systems. Data include records for admissions during calendar years 2000 through 2010 that were received and processed through October 10, 2011.¹

TEDS is an admission-based system, and TEDS admissions do not represent individuals. Thus, for example, an individual admitted to treatment twice within a calendar year would be counted as two admissions.

TEDS does not include all admissions to substance abuse treatment. It includes admissions to facilities that are licensed or certified by the State substance abuse agency to provide substance abuse treatment (or are administratively tracked for other reasons). In general, facilities reporting TEDS data are those that receive State alcohol and/or drug agency funds (including Federal Block Grant funds) for the provision of alcohol and/or drug treatment services. Additional information on the history and methodology of TEDS and this report as well as important issues related to State data collection systems are detailed in Appendix A.

This chapter details trends in the annual numbers and rates of admissions aged 12 and older for 2000 to 2010. Trend data are invaluable in monitoring changing patterns in substance abuse treatment admissions. These patterns reflect underlying changes in substance abuse in the population as well as changing priorities in the treatment/reporting system. (For example, limited resources and targeted programs may result in a shift of State funds from treatment of alcohol abusers to treatment of drug abusers.) TEDS data thus have important implications for resource allocation and program planning.

While the tables in this report present data by Census division (Figure 1) and by State or jurisdiction, it is important to note that comparisons between and across divisions and States should be made with caution. There are many factors (e.g., facilities included, clients included, ability to track multi-service episodes, services offered, and completeness and timeliness of reporting) that can affect comparability. See Appendix A for a full discussion.

¹ For researchers interested in more detailed analysis, TEDS public use files are available for online data analysis or download at the Substance Abuse and Mental Health Data Archive, which can be accessed at <http://www.datafiles.samhsa.gov>. Summary data for individual States that have submitted the full year of data are available online through the TEDS Quick Statistics website at <http://www.dasis.samhsa.gov/webt/NewMapv1.htm>.

All Admissions

Table 1.1 presents the total number of treatment admissions aged 12 and older by Census division and State or jurisdiction for 2000 through 2010.²

- For 2010, 1,820,737 admissions aged 12 and older were reported to TEDS by 48 States and Puerto Rico (the District of Columbia, Georgia, and Mississippi did not report admissions for 2010).
- Between 2000 and 2010, the number of treatment admissions aged 12 and older increased by 4 percent.
- Between 2000 and 2010, about 23 percent of all admissions reported were in the Middle Atlantic division. The Pacific, East North Central, and South Atlantic divisions reported 14 to 15 percent of all admissions; the New England, West North Central, and Mountain divisions reported 7 to 10 percent of all admissions; and the East South Central and West South Central divisions reported 3 to 5 percent of all admissions.

Figure 1
U.S. Census divisions

² Data were not submitted or were incomplete for one or more years in some States or jurisdictions because of changes to their data collection systems: Alabama (2007), Alaska (2004-2006), Arkansas (2004), the District of Columbia (2004-2010), Georgia (2006-2010), Mississippi (2010), Puerto Rico (2000-2002), and West Virginia (2000-2002). The populations of these States were excluded from calculations of admission rate by Census division.

Table 1.2 presents the treatment admissions rates per 100,000 population aged 12 and older by Census division and State or jurisdiction for 2000 through 2010.

- Between 2000 and 2010, the U.S. population aged 12 and older grew by about 11 percent but the number of treatment admissions increased by only 4 percent. Consequently, the treatment admission rate in 2010 (691 per 100,000 population aged 12 and older) was about 6 percent lower than the rate in 2000 (738 per 100,000 population).
- Admission rates were highest in the New England and Middle Atlantic divisions. Between 2000 and 2010, the admission rate per 100,000 population aged 12 and older ranged from 1,132 to 1,479 in the New England division and from 1,246 to 1,318 in the Middle Atlantic division.
- Individual State admission rates (excluding Puerto Rico) varied from approximately 140 per 100,000 population to about 2,400 per 100,000. As noted above, there are many possible explanations for this variation (see Appendix A), and comparisons among States should be made with caution.

Table 1.3 presents the treatment admission rate adjusted for age, gender, and race/ethnicity to the U.S. 2010 population by Census division and State or jurisdiction for 2000 through 2010. Adjustment is a way to make fairer comparisons when there are different admission rates among population subgroups and different proportions of the subgroups in each division, State, or jurisdiction. The adjusted rates are the rates that would have been seen if each division, State, or jurisdiction had the same distribution of subgroups as the U.S. 2010 population.

For example, the 2010 unadjusted rates (Table 1.2) for Alaska and Rhode Island were 1,147 and 1,122 per 100,000 population aged 12 and older, respectively—these two States had similar rates. However, the adjusted rates (844 per 100,000 for Alaska and 1,199 per 100,000 for Rhode Island; Table 1.3) indicate that, if the population distribution in the two States were similar, Alaska's admission rate would be 30 percent lower than Rhode Island's. This is because Alaska had high admission rates in subgroups that were a large proportion of the State's population but represented relatively small proportions of the U.S. population. In contrast, Rhode Island's population distribution very closely resembles the U.S. population. This example clearly demonstrates that if Alaska's 2010 population distribution were similar to that of the United States in 2010, then one would expect the admission rate to be about three-fourths of what it actually was in 2010.

Selected Primary Substance

Six substance groups (alcohol, marijuana, heroin, cocaine, methamphetamine/amphetamines, and opiates other than heroin)³ accounted for 96 percent of all TEDS admissions aged 12 and older in 2010.⁴

Tables 1.4a–1.9a present the numbers of admissions aged 12 and older by Census division and by State and jurisdiction from 2000 through 2010 for each of the selected primary substances.

³ Opiates other than heroin include methadone, codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects.

⁴ See: Substance Abuse and Mental Health Services Administration, *Treatment Episode Data Set (TEDS). 2000 - 2010. National Admissions to Substance Abuse Treatment Services*, DASIS Series: S-61, HHS Publication No. (SMA) 12-4701, Rockville, MD; Substance Abuse and Mental Health Services Administration, 2012, Table 1.1b.

Tables 1.4b–1.9b present the admission rate per 100,000 aged 12 and older by Census division and by State and jurisdiction from 2000 through 2010 for each of the selected primary substances.

The admission rates are mapped in Figures 2 through 7. The map categories are based on the median, 75th, 90th, and 99th percentiles of the range of 2000 admission rates for each substance. Therefore, for the 50 States and jurisdictions reporting in 2000, each 2000 map generally shows 1 State in red (the 99th percentile and above), about 5 States in light red (the 90th to 98th percentiles), about 8 States in blue (the 75th to 89th percentiles), about 12 States in tan (the 50th to 74th percentiles), and about 24 States in lighter tan (below the median 2000 U.S. rate). Cross hatched indicate States or jurisdictions where data were not submitted or were incomplete.

Alcohol

- The treatment admission rate for primary alcohol was 18 percent lower in 2010, at 282 per 100,000 population aged 12 and older, than in 2000 (342 per 100,000). The rate fluctuated between 2000 and 2010 but 2000 had the highest rate and 2010 had the lowest rate in this time period [Table 1.4b and Figure 2].
- Alcohol admission rates were between 2 to 46 percent lower in 2010 than in 2000 in eight Census divisions. The rate was about 13 percent higher in the West North Central division.
- Among individual states and jurisdictions, alcohol admission rates were lower in 2010 than in 2000 in 32 of the 47 States reporting in both years, higher in 14 States, and the same in 1 State.
- From 2000 through 2010, alcohol treatment admission rates were generally highest in the Middle Atlantic, New England, Mountain, and West North Central divisions.

Marijuana

- The treatment admission rate for primary marijuana was 21 percent higher in 2010, at 127 per 100,000 population aged 12 and older, than in 2000 (105 per 100,000) [Table 1.5b and Figure 3].
- Marijuana admission rates were between 12 and 51 percent higher in 2010 than in 2000 in seven of the nine Census divisions. It was 2 and 3 percent lower in the Mountain and South Atlantic divisions.
- Among individual States and jurisdictions, marijuana admission rates were higher in 2010 than in 2000 in 31 of the 47 States reporting in both years, and lower in 16 States.
- From 2000 through 2010, marijuana treatment admission rates were consistently highest in the West North Central and Middle Atlantic divisions.

Heroin

- The treatment admission rate for primary heroin was 15 percent lower in 2010, at 97 per 100,000 population aged 12 and older, than in 2000 (114 per 100,000) [Table 1.6b and Figure 4].
- Despite the overall declining trend after 2002, heroin admission rates were between 12 and 167 percent higher in 2010 than in 2000 in five of the nine Census divisions. Rates were lower by between 2 and 54 percent in four divisions.

- Among individual States, heroin admission rates were higher in 2010 than in 2000 in 27 of the 46 States reporting in both years,⁵ lower in 17, and the same in 2.
- From 2000 through 2010, heroin treatment admission rates were consistently highest in the New England and Middle Atlantic divisions.

Cocaine

- The treatment admission rate for primary cocaine was 44 percent lower in 2010, at 56 per 100,000 population aged 12 and older, than in 2000 (100 per 100,000) [Table 1.7b and Figure 5].
- Note that Washington, DC was the only jurisdiction in 2000 that fell in the 99th percentile of cocaine use; however, it does not show on the map (Figure 5).
- Cocaine admission rates were between 23 and 62 percent lower in 2010 than in 2000 in each of the nine Census divisions.
- Among individual States, cocaine admission rates were lower in 2010 than in 2000 in 38 of the 47 States reporting in both years, higher in 9.
- From 2000 through 2010, cocaine treatment admission rates were highest in the Middle Atlantic division.

Methamphetamine/amphetamines

- The treatment admission rate for methamphetamine/amphetamines was 26 percent higher in 2010, at 43 per 100,000 population aged 12 and older, than in 2000 (34 per 100,000). Methamphetamine/amphetamine treatment admission rates peaked in 2005 at 69 per 100,000, then declined in every year through 2010 [Table 1.8b and Figure 6].
- Methamphetamine/amphetamine rates were between 11 and 175 percent higher in 2010 than in 2000 in each of the nine Census divisions.
- Among individual States, methamphetamine/amphetamine admission rates were higher in 2010 than in 2000 in 35 of the 47 States reporting in both years, lower in 10, and the same in 2.
- From 2000 through 2010, methamphetamine/amphetamines treatment admission rates in the Pacific division were on average approximately 43 percent higher than in the division with the next highest rates, the West North Central Division.

Opiates other than heroin

- The treatment admission rate for opiates other than heroin was 400 percent higher in 2010, at 60 per 100,000 population aged 12 and older, than in 2000 (12 per 100,000). Rates increased in every year from 2000 through 2010 [Table 1.9b and Figure 7].

⁵ Tennessee reported all heroin admissions as *Opiates other than heroin* for 2000 through June 2009. Tennessee began disaggregating heroin admissions from other opiates in July 2009. In this report, all Tennessee's heroin admissions are still included in the other opiates category since there is less than a full year of disaggregated heroin data. Therefore, Tennessee's admissions are not included in this comparison and not included in the associated maps (Figures 4 and 7).

- The admission rates for opiates other than heroin were between 300 and 771 percent higher in 2010 than in 2000 in each of the nine Census divisions.
- Among individual States and jurisdictions, admission rates for opiates other than heroin were higher in 2010 than in 2000 in all 47 States reporting in both years.
- From 2000 through 2010, treatment admission rates for opiates other than heroin were highest in the New England division. For each of those years, the New England rate was more than twice as high as the rates for most if not all of the other divisions.

CHAPTER 2

SUBSTANCE ABUSE TREATMENT ADMISSIONS AGED 12 AND OLDER, BY PRIMARY SUBSTANCE OF ABUSE: 2010

This chapter presents numbers of substance abuse treatment admissions aged 12 and older and admission rates from the Treatment Episode Data Set (TEDS) by Census division and State or jurisdiction for admissions in 2010, according to primary substance of abuse.

As noted previously, comparisons between and across divisions and States should be made with caution. There are many factors (e.g., facilities included, clients included, ability to track multi-service episodes, service type, and completeness and timeliness of reporting) that can affect comparability. See Appendix A for a full discussion.

Table 2.1 indicates the proportions of admissions in 2010 by service type according to Census division and State or jurisdiction. A State's mix of service types (e.g., outpatient, detoxification, rehabilitation/residential, opioid therapy) can have a significant effect on its admission rates. There is higher client turnover and therefore more admissions in short-stay services such as detoxification than in long-stay services such as outpatient or long-term rehabilitation/residential treatment. Admission rates for individual substances of abuse may be affected as well (e.g., detoxification is more closely associated with alcohol or heroin use than with use of other substances).¹

Table 2.2 presents the total number of treatment admissions aged 12 and older by primary substance of abuse, according to Census division and State or jurisdiction for 2010.

Table 2.3 presents the treatment admission rates per 100,000 population aged 12 and older by primary substance of abuse, according to Census division and State or jurisdiction for 2010.

- In 2010, the treatment admission rate was higher for primary alcohol abuse than for illicit drugs. The primary alcohol admission rate was 282 per 100,000 population (the rate for alcohol alone was 156 per 100,000 and the rate for alcohol with secondary drug abuse was 126 per 100,000). The highest rates for illicit drugs were for marijuana (127 per 100,000) and heroin (97 per 100,000).
- Treatment admission rates for 2010 were higher for primary alcohol abuse than for illicit drugs in each Census division. The most significant primary illicit drugs were:
 - Marijuana—West North Central, Middle Atlantic, East North Central, Pacific, South Atlantic, New England, Mountain, West South Central, and East South Central

¹ See: Substance Abuse and Mental Health Services Administration, *Treatment Episode Data Set (TEDS). 2000 - 2010. National Admissions to Substance Abuse Treatment Services*, DASIS Series: S-61, HHS Publication No. (SMA) 12-4701, Rockville, MD; Substance Abuse and Mental Health Services Administration, 2012, Table 2.7.

- Heroin—New England, Middle Atlantic, and East North Central
- Opiates other than heroin—East South Central
- Methamphetamine/amphetamines—Pacific
- Treatment admission rates for 2010 were higher for primary alcohol abuse than for any of the major illicit drugs in 44 of the 49 reporting States and jurisdictions. The exceptions where an illicit drug admission rate was higher than the alcohol admission rate was Massachusetts (heroin); Florida, Delaware, and Idaho (marijuana); and California (methamphetamine/amphetamines).
- In the 44 States or jurisdictions where admission rates for primary alcohol were higher than the rate for any illicit drug, the most frequently reported primary illicit drugs were:
 - Marijuana—Alabama, Alaska, Arizona, Arkansas, Colorado, Hawaii, Illinois, Indiana, Iowa, Kansas, Louisiana, Michigan, Minnesota, Missouri, Montana, North Carolina, North Dakota, Ohio, Oklahoma, Oregon, South Carolina, South Dakota, Texas, Virginia, Washington, Wisconsin, and Wyoming
 - Heroin—Connecticut, Maryland, New Jersey, New York, Pennsylvania, Puerto Rico, and Rhode Island
 - Opiates other than heroin—Kentucky, Maine, New Hampshire, Tennessee, Vermont, and West Virginia
 - Methamphetamine/amphetamines—Arizona, Nebraska, Nevada, New Mexico, and Utah

Table 2.4 presents the 2010 treatment admission rate by primary substance, adjusted for age, gender, and race/ethnicity to the U.S. 2010 population by Census division and State or jurisdiction, for 2010. Adjustment is a way to make fairer comparisons when there are different admission rates among population subgroups and different proportions of the subgroups in each division, State, or jurisdiction. The adjusted rates are the rates that would have been seen if each division, State, or jurisdiction had the same distribution of subgroups as the U.S. 2010 population.

- Adjustment of the 2010 treatment admission rates for age, gender, and race/ethnicity did not change the relative ranking of alcohol and illicit drugs for either the United States as a whole or for any of the Census divisions.
- Adjustment of the 2010 treatment admission rates for age, gender, and race/ethnicity did not change the relative ranking of alcohol and illicit drugs for most States. For New Jersey, heroin replaced alcohol as the most common substance of abuse among treatment admissions, and for West Virginia, opiates other than heroin replaced alcohol as the most common substance of abuse among treatment admissions. For Utah, marijuana replaced methamphetamine/amphetamines as the most common illicit substance of abuse among treatment admissions.

CHAPTER 3

CHARACTERISTICS OF SUBSTANCE ABUSE TREATMENT ADMISSIONS AGED 12 AND OLDER, BY STATE OR JURISDICTION AND PRIMARY SUBSTANCE OF ABUSE: 2010

This chapter presents data on the demographic characteristics of substance abuse treatment admissions aged 12 and older from the Treatment Episode Data Set (TEDS) for admissions, primary substance of abuse, and for individual States and jurisdictions.

As noted previously, comparisons between and across States and jurisdictions should be made with caution. There are many factors (e.g., facilities included, clients included, ability to track multi-service episodes, services offered, and completeness and timeliness of reporting) that can affect comparability. See Appendix A for a full discussion.

Tables 3.1-3.49 present, for each State or jurisdiction reporting TEDS 2010 admissions, the percentage distribution of demographic characteristics (gender, age group, and race/ethnicity) by primary substance of abuse for admissions aged 12 and older.

Figures 8-59 depict, for each individual State or jurisdiction, the percentage distribution of admissions aged 12 and older for selected primary substances for 2000 through 2010.

Figure 8. Alabama admissions aged 12 and older, by primary substance of abuse: 2000-2010

Figure 9. Alaska admissions aged 12 and older, by primary substance of abuse: 2000-2010

¹ These drugs include codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects. Non-prescription use of methadone is not included.

² Tennessee included heroin admissions in other opiates through June 2009. In this report, Tennessee's 2009 heroin admissions are still included in the other opiates category since there is less than a full year of disaggregated heroin data.

-- Quantity is zero.

¹ These drugs include codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects. Non-prescription use of methadone is not included.

² Tennessee included heroin admissions in other opiates through June 2009. In this report, Tennessee's 2009 heroin admissions are still included in the other opiates category since there is less than a full year of disaggregated heroin data.

-- Quantity is zero.

† Less than 1 per 100,000.

‡ No data, or less than a full calendar year of data, submitted.

APPENDIX A

ABOUT THE TREATMENT EPISODE DATA SET (TEDS)

Introduction

This report presents data from the Treatment Episode Data Set (TEDS) on the demographic and substance abuse characteristics of admissions to substance abuse treatment. The Center for Behavioral Health Statistics and Quality (CBHSQ), Substance Abuse and Mental Health Services Administration (SAMHSA), coordinates and manages collection of TEDS data from the States.

The Treatment Episode Data Set (TEDS) is a compilation of client-level data routinely collected by the individual State administrative data systems to monitor their substance abuse treatment systems. Generally, facilities that are required to report to the State substance abuse agency (SSA) are those that receive public funds and/or are licensed or certified by the SSA to provide substance abuse treatment (or are administratively tracked for other reasons).

TEDS is one of the three components of SAMHSA's Drug and Alcohol Services Information System (DASIS), the primary source of national data on substance abuse treatment. The other two components are:

- The Inventory of Substance Abuse Treatment Services (I-SATS), a continuously-updated comprehensive listing of all known public and private substance abuse treatment facilities.
- The National Survey of Substance Abuse Treatment Services (N-SSATS), an annual survey of the location, characteristics, services offered, and utilization of alcohol and drug abuse treatment facilities in I-SATS.

The TEDS system comprises two major components, the Admissions Data Set and the Discharge Data Set. The TEDS Admissions Data Set includes client-level data on substance abuse treatment admissions from 1992 through the present. The TEDS Discharge Data Set can be linked at record level to admissions, and includes information from clients discharged in 2000 and later. For both data sets, selected data items from the individual State data files are converted to a standardized format consistent across States. These standardized data constitute TEDS.

The TEDS Admissions Data System consists of a Minimum Data Set of items collected by all States, and a Supplemental Data Set where individual data items are reported at the States' option.

The Minimum Data Set consists of 19 items that include:

- Demographic information
- Primary, secondary, and tertiary substances and their route of administration, frequency of use, and age at first use

- Source of referral to treatment
- Number of prior treatment episodes
- Service type, including planned use of medication-assisted opioid therapy

The Supplemental Data Set items include psychiatric, social, and economic measures.

History

National-level data collection on admissions to substance abuse treatment was first mandated in 1972 under the Drug Abuse Office and Treatment Act, P.L. 92-255. This act initiated Federal funding for drug treatment and rehabilitation, and required reporting on clients entering drug (but not alcohol) abuse treatment. The Client-Oriented Data Acquisition Process (CODAP) was developed to collect admission and discharge data directly from Federally-funded drug treatment programs. (Programs for treatment of alcohol abuse were not included.) Reporting was mandatory for all such programs, and data were collected using a standard form. CODAP included all clients in Federally-funded programs regardless of individual funding source. Reports were issued from 1973 to 1981 based on data from 1,800 to 2,000 programs, including some 200,000 annual admissions.

In 1981, collection of national-level data on admissions to substance abuse treatment was discontinued because of the introduction of the Alcohol, Drug Abuse, and Mental Health Services (ADMS) Block Grant. The Block Grant transferred Federal funding from individual programs to the States for distribution, and it included no data reporting requirement. Participation in CODAP became voluntary; although several States submitted data through 1984, the data were in no way nationally representative.

In 1988, the Comprehensive Alcohol Abuse, Drug Abuse, and Mental Health Amendments (P.L. 100-690) established a revised Substance Abuse Prevention and Treatment (SAPT) Block Grant and mandated Federal data collection on clients receiving treatment for either alcohol or drug abuse. The Treatment Episode Data Set (TEDS) data collection effort represents the Federal response to this mandate. TEDS began in 1989 with the issue of 3-year development grants to States.

State Data Collection Systems

TEDS is an exceptionally large and powerful data set that covers a significant proportion of all admissions to substance abuse treatment. TEDS is a compilation of data collected through the individual data collection systems of the State substance abuse agencies (SSAs) for substance abuse treatment. States have cooperated with the Federal Government in the data collection process, and substantial progress has been made toward developing a standardized data set. However, because each State system is unique and each State has unique powers and mandates, significant differences exist among State data collection systems. These differences are compounded by evolving health care payment systems, and State-to-State comparisons must be made with extreme caution.

The number and client mix of TEDS admissions do not represent the total national demand for substance abuse treatment or the prevalence of substance abuse in the general population.

States differ widely in the amount of public funding available for substance abuse treatment and in the constraints placed on the use of funds. States may be directed to target special populations such as pregnant women or adolescents. Where funds are limited, States may be compelled to exercise triage in admitting persons to treatment, admitting only those with the most “severe” problems. In States with higher funding levels, a larger proportion of the population in need of treatment may be admitted, including the less severely impaired.

States may include or exclude reporting by certain sectors of the treatment population, and these sectors may change over time. For example, treatment programs based in the criminal justice system may or may not be administered through the State SSA. Detoxification facilities, which can generate large numbers of admissions, are not uniformly considered treatment facilities and are not uniformly reported by all States.

Appendix Table 1 presents key characteristics of State data collection systems for 2010. However, these characteristics can change as State substance abuse treatment systems change, and thus may be responsible for some year-to-year variation within States.

- *Facilities included.* The scope of facilities included in TEDS is affected by differences in State licensure, certification, and accreditation practices, and disbursement of public funds. Most SSAs require facilities that receive State/public funding (including Federal Block Grant funds) for the provision of alcohol and/or drug treatment services to report data to the SSA. Generally this funding is distributed by the SSA but may be distributed by another public agency.
- Some SSAs regulate private facilities, methadone clinics, and/or individual practitioners and require them to report TEDS data. Others do not because of the difficulty in obtaining data from these facilities, although these facilities may report voluntarily. Facilities operated by Federal agencies (e.g., the Bureau of Prisons, the Department of Defense, and the Department of Veterans Affairs) generally do not report TEDS data to the SSA, although some facilities operated by the Indian Health Service are included. Hospital-based substance abuse treatment facilities are frequently not licensed through the SSA and do not report TEDS data. Correctional facilities (State prisons and local jails) are monitored by the SSA and report TEDS data in some States but not in others.
- The primary goal of TEDS is to monitor the characteristics of clients admitted to planned, continuing treatment regimens. Thus early intervention and crisis intervention programs that do not lead to enrollment in continued treatment are excluded from TEDS.
- *Clients included.* About 60 percent of States reported data on all admissions to all eligible facilities, although some reported only, or largely, admissions financed by public funds. TEDS is an admission-based system; therefore, TEDS admissions do not represent individuals. For example, an individual admitted to treatment twice within a calendar year would be counted as two admissions.
- *Ability to track multi-service episodes.* The goal for the TEDS system is to enumerate treatment episodes by distinguishing the initial admission of a client from his/her subsequent transfer to a different service type (e.g., from rehabilitation/residential treatment to outpatient) within a single continuous treatment episode. Thus TEDS records are ideally coded as admissions if they

represent the initial treatment service in a treatment episode and as transfers if they represent a change in service type or a change in provider without an interruption in treatment.

This requires, however, that clients be assigned unique IDs that can be linked across providers; not all States are legally and/or technologically able to do this. Most States can identify as transfers a change in service type within the structure of a given provider. However, fewer can also identify a transfer involving a change of provider. Several States do not track transfers, but instead report as transfers those clients who are discharged and readmitted within a specified (State-specific) time period.

Because some admission records in fact may represent transfers, the number of admissions reported probably overestimates the number of treatment episodes. Some States reported a limited data set on codependents of substance abusers entering treatment. On average, from 2000 through 2010, 83 percent of all records submitted were client admissions, 15 percent were client transfers, and 2 percent were codependents of substance abusers.

- *Services offered.* A State's mix of service types (e.g., outpatient, detoxification, rehabilitation/residential, opioid therapy) can have a significant effect on its admission rate. There is higher client turnover and therefore more admissions in short-stay services such as detoxification than in long-stay services such as outpatient or long-term residential treatment. Admission rates for individual substances of abuse may be affected as well (e.g., detoxification is more closely associated with alcohol or heroin use than with use of other substances).
- *Completeness and timeliness of reporting.* SAMHSA, in reporting national-level TEDS data, must balance timeliness of reporting and completeness of the data set. There may be a time lag in the publication of SAMHSA's annual report because preparation cannot begin until States have completed their data submission for that year. States in turn rely on individual facilities to report in a timely manner so they can submit TEDS data to SAMHSA at regular intervals.

Admissions from facilities that report late to the States will appear in a later data submission to SAMHSA, so the number of annual admissions in a report may be higher in subsequent reports. The number of additional admissions is small because of the time lag in issuing the report. Thus the percentage distributions will change very little in subsequent reports, although Census division- and State-level data may change somewhat more for States with reporting delays (State report only).

States continually review and improve their data collection and processing. When systematic errors are identified, States may revise or replace historical TEDS data files. While this process represents an improvement in the data system, the historical statistics in this report will differ slightly from those in earlier reports.

Appendix Tables 2 and 3 indicate the proportions of records by State or jurisdiction for which valid data were received for 2010. States are expected to report all variables in the Minimum Data Set (Appendix Table 2). Variables in the Supplemental Data Set are collected at the States' option (Appendix Table 3).

Report-Specific Considerations

- The report focuses on treatment admissions for substance abusers, so admissions for treatment as a codependent of a substance abuser are excluded. Records for identifiable transfers within a single treatment episode are also excluded.
- Records with partially complete data have been retained. Where records include missing or invalid data for a specific variable other than primary, secondary, or tertiary substance, those records are excluded from tabulations of that variable. For substance variables, missing or unknown responses were included in the category “Other.” The total number of admissions on which a percentage distribution is based is reported in each table.
- Records with partially complete data have been retained. If a variable is coded with a value indicating the data were missing or miscoded, the record is excluded from tabulations of that variable. The total number of records on which a percentage distribution is based is reported in each table.
- Variables in the Supplemental Data Set are not collected by all States. States that did not collect a specific variable are excluded from tabulations of that variable. The total number of admissions on which a percentage distribution is based is reported in each table.
- The *primary, secondary, and tertiary substances of abuse* reported to TEDS are those substances that led to the treatment episode and not necessarily a complete enumeration of all drugs used at the time of admission.
- Primary alcohol admissions are classified as “Alcohol only” or “Alcohol with secondary drug abuse.” The latter indicates a primary alcohol admission with a specified secondary and/or tertiary drug. All other primary alcohol admissions are classified as “Alcohol only.”
- Cocaine admissions are classified according to route of administration as smoked and other route. Smoked cocaine primarily represents crack or rock cocaine, but can also include cocaine hydrochloride (powder cocaine) when it is free-based. Non-smoked cocaine includes all cocaine admissions where cocaine is injected, inhaled, or taken orally; it also includes admissions where the route of administration is unknown or not collected. Thus the TEDS estimate of admissions for smoked cocaine is conservative.
- Methamphetamine/amphetamine admissions include admissions for both substances, but are primarily for methamphetamine. In 2010, methamphetamine constituted about 91 percent of combined methamphetamine/amphetamine admissions. Oregon and Texas, States with large numbers of methamphetamine admissions, reported them as *Other amphetamines* until 2005 and 2006, respectively.
- For this report, secondary and tertiary substances (see Appendix B) are grouped and referred to as secondary substances.
- Significant changes in the clients or facilities reported to TEDS by some States and jurisdictions can result in changes in the number of admissions large enough to influence trends.

Appendix Table 1. State data system reporting characteristics: 2010

State or jurisdiction	Facilities reporting TEDS data to the State SSA		Eligible clients	Change of service within episode	Change of provider within episode
	Facilities required to report to the State SSA ¹	Facilities reporting voluntarily to the State SSA			
Alabama	Facilities that receive State/public funding	None	All clients in facility	Admission	Admission

APPENDIX B

TEDS DATA ELEMENTS

TEDS MINIMUM DATA SET

CLIENT OR CODEPENDENT/COLLATERAL

Specifies whether the admission record is for a substance abuse treatment client, or a person being treated for his/her codependency or collateral relationship with a substance abuser.

- **Client**—Must meet all of the following criteria:
 - Has an alcohol or drug related problem
 - Has completed the screening and intake process
 - Has been formally admitted for treatment or recovery service in an alcohol or drug treatment unit
 - Has his or her own client record

A person is not a client if he or she has completed only a screening or intake process or has been placed on a waiting list.

- **Codependent/collateral**—Must meet all of the following criteria:
 - Has no alcohol or drug related problem
 - Is seeking services because of problems arising from his or her relationship with an alcohol or drug user
 - Has been formally admitted for service to a treatment unit
 - Has his or her own client record or has a record within a primary client record

GUIDELINES: Reporting of data for *Codependent/collaterals* is optional. If the State opts to report codependent/collateral clients, the mandatory fields are *State code*, *Provider identifier*, *Client identifier*, *Client transaction type*, *Codependent/collateral*, and *Date of admission*. Reporting of the remaining fields in the TEDS Minimum and Supplemental Data Sets is optional. For all items not reported, the data field should be coded with the appropriate “Not collected” or “Not applicable” code.

If a substance abuse client with an existing record in TEDS becomes a codependent, a new client record should be submitted indicating that the client has been admitted as a codependent, and vice versa.

If a record does not include a value for this field, it is assumed to be a substance abuse client record.

TRANSACTION TYPE

Identifies whether a record is for an initial admission or a transfer/change in service. Note: Some States may use other terminology such as “initial admission” and “transfer admission” in place of “admission” and “transfer.”

- **A**—Admission
- **T**—Transfer/change in service

GUIDELINES: For TEDS, a treatment episode is defined as that period of service between the beginning of treatment for a drug or alcohol problem and the termination of services for the prescribed treatment plan. The episode includes one admission (when services begin) and at least one discharge (when services end). Within a treatment episode, a client may transfer to a different service, facility, provider, program, or location. Each admission and transfer record should have an associated discharge record.

When it is feasible for the State to identify transfers, they should be reported as transfers in admissions data submissions. When admissions and transfers cannot be differentiated in a State data system, such changes in service or facility should be reported to TEDS as admissions.

Data set considerations for transfers:

- All fields from the transfer record should be updated to reflect values at the time of transfer except the following fields, which must have the same values as in the associated (preceding) admission record: *Client ID*, *Codependent/collateral*, *Date of birth*, *Sex*, *Race*, and *Ethnicity*. If a field cannot be updated, it should be transmitted to TEDS with its value from the associated (preceding) admission record.
- *Date of admission* is defined as the date services begin after the transfer to another service or facility.

DATE OF ADMISSION

The day when the client receives his or her first direct treatment or recovery service. For transfers, this is the date when client receives his or her first direct treatment after the transfer has occurred.

TYPE OF SERVICES

Describes the type of service and treatment setting in which the client is placed at the time of admission or transfer.

- **Detoxification, 24-hour service, hospital inpatient**—24-hour per day medical acute care services in a hospital setting for detoxification of persons with severe medical complications associated with withdrawal
- **Detoxification, 24-hour service, free-standing residential**—24-hour per day services in a non-hospital setting providing for safe withdrawal and transition to ongoing treatment
- **Rehabilitation/residential, hospital (other than detoxification)**—24-hour per day medical care in a hospital facility in conjunction with treatment services for alcohol and other drug abuse and dependency

- **Rehabilitation/residential, short-term (30 days or fewer)**—Typically, 30 days or less of non-acute care in a setting with treatment services for alcohol and other drug abuse and dependency
- **Rehabilitation/residential, long-term (more than 30 days)**—Typically, more than 30 days of non-acute care in a setting with treatment services for alcohol and other drug abuse and dependency; this may include transitional living arrangements such as halfway houses
- **Ambulatory, intensive outpatient**—As a minimum, the client must receive treatment lasting two or more hours per day for three or more days per week
- **Ambulatory, non-intensive outpatient**—Ambulatory treatment services including individual, family, and/or group services, and may include pharmacological therapies
- **Ambulatory, detoxification**—Outpatient treatment services providing for safe withdrawal in an ambulatory setting (pharmacological or non-pharmacological)

AGE

Identifies client's age at admission. Derived from client's date of birth and date of admission.

- **0**—Indicates a newborn with a substance dependency problem
- **1-96**—Indicates the age at admission

SEX

Identifies client's gender.

- **Male**
- **Female**

RACE

Specifies the client's race.

- **Alaska Native (Aleut, Eskimo, Indian)**—Origins in any of the original people of Alaska
- **American Indian (other than Alaska Native)**—Origins in any of the original people of North America and South America (including Central America) and who maintain cultural identification through tribal affiliation or community attachment
- **Asian or Pacific Islander**—Origins in any of the original people of the Far East, the Indian subcontinent, Southeast Asia, or the Pacific Islands
 - **Asian**—Origins in any of the original people of the Far East, the Indian subcontinent, or Southeast Asia, including, for example, Cambodia, China, India, Japan, Korea, Malaysia, Philippine Islands, Thailand, and Vietnam
 - **Native Hawaiian or other Pacific Islander**—Origins in any of the original people of Hawaii, Guam, Samoa, or other Pacific Islands
- **Black or African American**—Origins in any of the black racial groups of Africa
- **White**—Origins in any of the original people of Europe, North Africa, or the Middle East
- **Other single race**—Client is not classified in any category above or whose origin group, because of area custom, is regarded as a racial class distinct from the above categories

- **Two or more races**—For use when the State data system allows multiple race selection and more than one race is indicated

GUIDELINES: If a State does not distinguish between *American Indian* and *Alaska Native*, both should be coded as *American Indian*. If a State does not distinguish between *Asian* and *Native Hawaiian or other Pacific Islander*, both should be coded as *Asian or Pacific Islander*. For States that collect multiple races: a) when a single race is designated, the specific race code should be used; b) if the State collects a primary or preferred race along with additional races, the code for the primary/preferred race should be used; c) if the State uses a system such as an algorithm to select a single race when multiple races have been designated, the same system may be used to determine the race code for TEDS. When two or more races have been designated and neither (b) nor (c) above apply, the TEDS code for *Two or more races* should be used.

MEDICATION-ASSISTED OPIOID THERAPY

Identifies whether the use of methadone or buprenorphine is part of the client’s treatment plan.

- **Yes**
- **No**

ETHNICITY

Identifies client’s specific Hispanic origin.

- **Puerto Rican**—Of Puerto Rican origin, regardless of race
- **Mexican**—Of Mexican origin, regardless of race
- **Cuban**—Of Cuban origin, regardless of race
- **Other specific Hispanic**—Of known Central or South American or any other Spanish cultural origin (including Spain), other than Puerto Rican, Mexican, or Cuban, regardless of race
- **Hispanic (specific origin not specified)**—Of Hispanic origin, but specific origin not known or not specified
- **Not of Hispanic origin**

GUIDELINES: If a State does not collect specific Hispanic detail, code *Ethnicity* for Hispanics as *Hispanic (specific origin not specified)*.

NUMBER OF PRIOR TREATMENT EPISODES

Indicates the number of previous treatment episodes the client has received in any drug or alcohol program. Changes in service for the same episode (transfers) should *not* be counted as separate prior episodes.

- **0 previous episodes**
- **1 previous episode**
- **2 previous episodes**
- **3 previous episodes**
- **4 previous episodes**

- **5 or more previous episodes**

GUIDELINES: It is preferred that the number of prior treatments be a self-reporting field collected at the time of client intake. However, this data item may be derived from the State data system if the system has that capability and episodes can be counted for at least several years.

EDUCATION

Specifies the highest school grade (number of school years) completed by the client.

- **0**—Less than one grade completed
- **1-25**—Years of school (highest grade) completed. For General Equivalency Degree, use *12*.

GUIDELINES: States that use specific categories for designating education level should map their codes to a logical number of years of school completed. For Associate's Degree, use *14*. For Bachelor's Degree, use *16*.

EMPLOYMENT STATUS

Identifies the client's employment status at the time of admission or transfer.

- **Full time**—Working 35 hours or more each week, including active duty members of the uniformed services
- **Part time**—Working fewer than 35 hours each week
- **Unemployed**—Looking for work during the past 30 days, or on layoff from a job
- **Not in labor force**—Not looking for work during the past 30 days, or a student, homemaker, disabled, retired, or an inmate of an institution. Clients in this category are further defined in the TEDS Supplemental Data Set item *Detailed not-in-labor-force*.

GUIDELINES: Seasonal workers are coded in this category based on their employment status at admission.

PRINCIPAL SOURCE OF REFERRAL

Describes the person or agency referring the client to the alcohol or drug abuse treatment program.

- **Individual (includes self-referral)**—Includes the client, a family member, friend, or any other individual who would not be included in any of the following categories; includes self-referral due to pending DWI/DUI
- **Alcohol/drug abuse care provider**—Any program, clinic, or other health care provider whose principal objective is treating clients with substance abuse problems, or a program whose activities are related to alcohol or other drug abuse prevention, education, or treatment
- **Other health care provider**—A physician, psychiatrist, or other licensed health care professional; or a general hospital, psychiatric hospital, mental health program, or nursing home
- **School (educational)**—A school principal, counselor, or teacher; or a student assistance program (SAP), the school system, or an educational agency
- **Employer/EAP**—A supervisor or an employee counselor

- **Other community referral**—Community or religious organization or any Federal, State, or local agency that provides aid in the areas of poverty relief, unemployment, shelter, or social welfare. Self-help groups such as Alcoholics Anonymous (AA), Al-Anon, and Narcotics Anonymous (NA) are also included in this category. Defense attorneys are included in this category.
- **Court/criminal justice referral/DUI/DWI**—Any police official, judge, prosecutor, probation officer, or other person affiliated with a Federal, State, or county judicial system. Includes referral by a court for DWI/DUI, clients referred in lieu of or for deferred prosecution, or during pretrial release, or before or after official adjudication. Includes clients on pre-parole, pre-release, work or home furlough, or TASC. Client need not be officially designated as “on parole.” Includes clients referred through civil commitment. Client referrals on this category are further defined in the TEDS Supplemental Data Set item *Detailed criminal justice referral*.

SUBSTANCE PROBLEM (PRIMARY, SECONDARY, OR TERTIARY)

These fields identify the client’s primary, secondary, and tertiary substance problems. Each *Substance problem* (primary, secondary, and tertiary) has associated fields for *Route of administration*, *Frequency of use*, *Age at first use*, and the TEDS Supplemental Data Set item *Detailed drug code*.

- **None**
- **Alcohol**
- **Cocaine/crack**
- **Marijuana/hashish**—Includes THC and any other *cannabis sativa* preparations
- **Heroin**
- **Non-prescription methadone**
- **Other opiates and synthetics**—Includes buprenorphine, codeine, hydrocodone, hydromorphone, meperidine, morphine, opium, oxycodone, pentazocine, propoxyphene, tramadol, and any other drug with morphine-like effects
- **PCP**—Phencyclidine
- **Other hallucinogens**—Includes LSD, DMT, STP, hallucinogens, mescaline, peyote, psilocybin, etc.
- **Methamphetamine**
- **Other amphetamines**—Includes amphetamines, MDMA, phenmetrazine, and other unspecified amines and related drugs
- **Other stimulants**—Includes methylphenidate and any other stimulants
- **Benzodiazepines**—Includes alprazolam, chlordiazepoxide, clonazepam, clorazepate, diazepam, flunitrazepam, flurazepam, halazepam, lorazepam, oxazepam, prazepam, temazepam, triazolam, and other unspecified benzodiazepines
- **Other non-benzodiazepine tranquilizers**—Includes meprobamate and other non-benzodiazepine tranquilizers
- **Barbiturates**—Amobarbital, pentobarbital, phenobarbital, secobarbital, etc.
- **Other non-barbiturate sedatives or hypnotics**—Includes chloral hydrate, ethchlorvynol, glutethimide, methaqualone, and other non-barbiturate sedatives or hypnotics

- **Inhalants**—Includes chloroform, ether, gasoline, glue, nitrous oxide, paint thinner, etc.
- **Over-the-counter medications**—Includes aspirin, cough syrup, diphenhydramine and other antihistamines, sleep aids, and any other legally obtained nonprescription medication
- **Other**—Includes diphenylhydantoin/phenytoin, GHB/GBL, ketamine, etc.

GUIDELINES: Substance problems are further defined in the TEDS Supplemental Data Set item *Detailed drug code*. For guidance on which specific substances to include in the substance categories, please refer to the detailed drug categories listed for *Detailed drug code*.

- *Substance problem and Route of administration:*
 - For States that do not collect *Detailed drug code*—A record may not have duplicate *Substance problems* with identical *Routes of administration*
 - For States that do collect *Detailed drug code*—Records may have duplicate *Substance problems* and identical *Route of administration* IF the corresponding *Detailed drug codes* are different or are “multiple” drug codes

USUAL ROUTE OF ADMINISTRATION (OF PRIMARY, SECONDARY, AND TERTIARY SUBSTANCES)

These fields identify the usual route of administration of the respective *Substance problems*.

- **Oral**
- **Smoking**
- **Inhalation**
- **Injection (IV or intramuscular)**
- **Other**

FREQUENCY OF USE (OF PRIMARY, SECONDARY, AND TERTIARY SUBSTANCES)

These fields identify the frequency of use of the respective *Substance problems*.

- **No use in the past month**
- **1-3 times in the past month**
- **1-2 times in the past week**
- **3-6 times in the past week**
- **Daily**

AGE OF FIRST USE (OF PRIMARY, SECONDARY, AND TERTIARY SUBSTANCE)

For drugs other than alcohol, these fields identify the age at which the client first used the respective substance. For alcohol, these fields record the age of first intoxication.

- **0**—Indicates a newborn with a substance dependency problem
- **1-96**—Indicates the age at first use

TEDS SUPPLEMENTAL DATA SET

PREGNANT AT TIME OF ADMISSION

Specifies whether the client was pregnant at the time of admission.

- **Yes**
- **No**
- **Not applicable.** Use this code for male clients

VETERAN STATUS

Identifies whether the client has served in the uniformed services (Army, Navy, Air Force, Marines, Coast Guard, Public Health Service Commissioned Corps, Coast and Geodetic Survey, etc.).

- **Yes**
- **No**

GUIDELINES: A Veteran is a person 16 years or over who has served (even for a short time), but is not now serving, on active duty in the US Army, Navy, Air Force, Marine Corps, Coast Guard, or Commissioned Corps of the US Public Health Service or National Oceanic and Atmospheric Administration, or who served as a Merchant Marine seaman during World War II. Persons who served in the National Guard or Military Reserves are classified as veterans only if they were ever called or ordered to active duty, not counting the 4-6 months for initial training or yearly summer camps.

PSYCHIATRIC PROBLEM IN ADDITION TO ALCOHOL OR DRUG PROBLEM

Identifies whether the client has a psychiatric problem in addition to his or her alcohol or drug use problem.

- **Yes**
- **No**

DSM CRITERIA DIAGNOSIS

The diagnosis of the substance abuse problem from the American Psychiatric Association's *Diagnostic and Statistical Manual of Mental Disorders*. DSM-IV is preferred, but use of the Third Edition or ICD codes is permissible.

MARITAL STATUS

Describes the client's marital status. The following categories are compatible with the U.S. Census.

- **Never married**—Includes clients whose *only* marriage was annulled

- **Now married**—Includes those living together as married
- **Separated**—Includes those separated legally or otherwise absent from spouse because of marital discord
- **Divorced**
- **Widowed**

LIVING ARRANGEMENTS

Specifies whether the client is homeless, living with parents, living in a supervised setting, or living independently on his or her own.

- **Homeless**—Clients with no fixed address; includes shelters
- **Dependent living**—Clients living in a supervised setting such as a residential institution, halfway house, or group home, and children (under age 18) living with parents, relatives, or guardians or in foster care
- **Independent living**—Clients living alone or with others without supervision. Includes adult children (age 18 and over) living with parents.

SOURCE OF INCOME SUPPORT

Identifies the client’s principal source of financial support. For children under 18, this field indicates the parents’ primary source of income/support.

- **Wages/salary**
- **Public assistance**
- **Retirement/pension**
- **Disability**
- **Other**
- **None**

GUIDELINES: States are encouraged to collect and report data for all valid categories, although collecting and reporting a subset of the categories is also acceptable. If the State collects only a subset of the categories, clients not fitting the collected subset must be coded as “Not collected.”

HEALTH INSURANCE

Specifies the client’s health insurance (if any). The insurance may or may not cover alcohol or drug treatment.

- **Private insurance** (other than Blue Cross/Blue Shield or an HMO)
- **Blue Cross/Blue Shield**
- **Medicare**
- **Medicaid**
- **Health maintenance organization (HMO)**
- **Other** (e.g., TRICARE, CHAMPUS)
- **None**

GUIDELINES: States are encouraged to collect and report data for all valid categories, although collecting and reporting a subset of the categories is also acceptable. If the State collects only a subset of the categories, clients not fitting the collected subset must be coded as “Not collected.”

DAYS WAITING TO ENTER TREATMENT

Indicates the number of days from the first contact or request for service until the client was admitted and the first clinical service was provided.

- **0-996**—Number of days waiting

GUIDELINES: This item is intended to capture the number of days the client must wait to begin treatment because of program capacity, treatment availability, admissions requirements, or other program requirements. It should not include time delays caused by client unavailability or client failure to meet any requirement or obligation.

EXPECTED/ACTUAL PRIMARY SOURCE OF PAYMENT

Identifies the primary source of payment for this treatment episode.

- **Self-pay**
- **Blue Cross/Blue Shield**
- **Medicare**
- **Medicaid**
- **Other government payments**
- **Worker’s Compensation**
- **Other health insurance companies**
- **No charge (free, charity, special research, or teaching)**
- **Other**

GUIDELINES: States are encouraged to collect and report data for all valid categories, although collecting and reporting a subset of the categories is also acceptable. If the State collects only a subset of the categories, clients not fitting the collected subset must be coded as “Not collected.” If a State collects Medicare and Medicaid as one category, clients with that *Expected Primary Source of Payment* should be coded “Unknown.” States operating under a split payment fee arrangement between multiple payment sources are to default to the payment source with the largest percentage. When the payment percentages are equal, the State can select either source.

DETAILED “NOT IN LABOR FORCE”

This field gives more detailed information about those clients who are coded as “Not in labor force” in the TEDS Minimum Data Set item *Employment status*.

- **Homemaker**
- **Student**
- **Retired**
- **Disabled**

- **Inmate of institution** (prison or institution that keeps a person, otherwise able, from entering the labor force)
- **Other**
- **Not applicable**

GUIDELINES: This field is to be used only when *Employment status* is coded “Not in labor force.” For any other employment status code, this field should be coded “Not applicable.” States are encouraged to collect and report data for valid categories, although collecting and reporting a subset of the categories is also acceptable. If the State collects only a subset of the categories, not-in-labor-force clients not fitting the collected subset must be coded as “Unknown.”

NUMBER OF ARRESTS IN 30 DAYS PRIOR TO ADMISSION

The number of arrests in the 30 days preceding the date of admission to treatment services.

- **0-96**—Number of arrests

GUIDELINES: This item is intended to capture the number of times the client was arrested for any cause during the 30 days preceding the date of admission to treatment. Any formal arrest is to be counted regardless of whether incarceration or conviction resulted and regardless of the status of the arrest proceedings at the time of admission.

DETAILED DRUG CODE (PRIMARY, SECONDARY, AND TERTIARY)

These fields identify, in greater detail, the drug problems recorded in the TEDS Minimum Data Set item *Substance problem*.

- | | |
|--------------------------------------|--|
| • Alcohol | • PCP or PCP combination |
| • Crack | • LSD |
| • Other cocaine | • Other hallucinogens |
| • Marijuana/hashish | • Methamphetamine/speed |
| • Heroin | • Amphetamine |
| • Non-prescription methadone | • Methylenedioxymethamphetamine (MDMA, Ecstasy) |
| • Buprenorphine | • Other amphetamines |
| • Codeine | • Methylphenidate (Ritalin) |
| • Hydrocodone (Vicodin) | • Other stimulants |
| • Hydromorphone (Dilaudid) | • Alprazolam (Xanax) |
| • Meperidine (Demerol) | • Chlordiazepoxide (Librium) |
| • Oxycodone (Oxycontin) | • Clonazepam (Klonopin, Rivotril) |
| • Pentazocine (Talwin) | • Clorazepate (Tranxene) |
| • Propoxyphene (Darvon) | • Diazepam (Valium) |
| • Tramadol (Ultram) | • Flunitrazepam (Rohypnol) |
| • Other opiates or synthetics | |

- **Flurazepam** (Dalmane)
- **Lorazepam** (Ativan)
- **Triazolam** (Halcion)
- **Other benzodiazepines**
- **Meprobamate** (Miltown)
- **Other tranquilizers**
- **Phenobarbital**
- **Secobarbital/amobarbital** (Tuinal)
- **Secobarbital** (Seconal)
- **Other barbiturate sedatives**
- **Ethchlorvynol** (Placidyl)
- **Glutethimide** (Doriden)
- **Methaqualone**
- **Other non-barbiturate sedatives**
- **Other sedatives**
- **Aerosols**
- **Anesthetics**
- **Nitrites**
- **Solvents**
- **Other inhalants**
- **Diphenhydramine**
- **Other over-the-counter**
- **Diphenylhydantoin/phenytoin** (Dilantin)
- **GHB/GBL** (gamma-hydroxybutyrate, gamma-butyrolactone)
- **Ketamine** (Special K)
- **Other drugs**

GUIDELINES: The *Detailed drug codes* are a means for States to report more detailed drug information than is possible in the TEDS Minimum Data Set *Substance problem* fields. Detailed drug codes also enable distinction between substances in instances where a client uses two or more drugs that are assigned the same substance problem code.

The *Substance problem* and the *Detailed drug codes* have been subdivided into “single” and “multiple” drugs. Drugs are considered “single” if they cannot be further subdivided and are considered “multiple” if more than one drug can be placed within this category. *Detailed drug codes* “LSD” and “Marijuana/hashish” are examples of single drugs. “Aerosols” and “Other benzodiazepines” are examples of multiple drugs.

The distinction between single and multiple drug categories is considered when two or more of a client’s *Substance problem* codes are the same and their corresponding *Routes of administration* are also the same. The following standards apply to the submission of the *Substance problem*, *Route of administration*, and *Detailed drug code* fields:

- For the *Substance problem* fields, a client record may not have identical drug codes in two fields with identical routes of administration AND identical SINGLE drug codes in the ASSOCIATED *Detailed drug code* fields.
- The client record may include two or more identical *Substance problem* codes if the reported substances are further divided into different specific drug types in the associated *Detailed drug code* fields.
- The client record may have duplicate instances of drugs defined as multiple in the *Detailed drug code* categories, with identical *Substance problem* and *Routes of administration*.

DETAILED CRIMINAL JUSTICE REFERRAL

This field gives more detailed information about those clients who are coded as “Court/criminal justice referral/DUI/DWI” in the TEDS Minimum Data Set item *Principal source of referral*.

- **State/Federal court**
- **Other court (not State or Federal)**
- **Probation/parole**
- **Other recognized legal entity** (e.g., local law enforcement agency, corrections agency, youth services, review board/agency)
- **Diversionary program** (e.g., TASC)
- **Prison**
- **DUI/DWI**
- **Other**
- **Not applicable**

GUIDELINES: This field is to be used only when *Principal source of referral* is coded “Court/criminal justice referral/DUI/DWI.” For all other *Principal source of referral* codes, this field should be coded “Not applicable.” States are encouraged to collect and report data for all valid categories, although collecting and reporting a subset of the categories is also acceptable. If the State collects only a subset of the categories, clients not fitting the collected subset must be coded as “Unknown.”

At Synectics, Sarbajit Sinha, Bea Blacklow, and Doren Walker were responsible for the content, analysis, and writing of the report.
